

Project R.1: motion retargeting for grasping tasks

- retargeting the motion of a human hand on different hand models for grasping tasks using synergies (correlation of degrees of freedom in patterns of more frequent use)
 - hand tracking via TouchDiver wearable haptic interface
 - C++/Python/Matlab programming
 - C++/Python programming
-
- relevant competences: robotics, neuroscience, coding
 - recommended for mixed groups of students

reference material

- previous project report
- Master thesis report

presentation of results

- written report with selected results + pdf, software, videos, presentation (all **shared in a Drive folder**)
- 20 min live presentation (ppt or other) of the obtained results
